Clinic Management **Mar – May 2025**

Role: Backend Developer & System Analyst | **Team size**: 3

Description: A web application developed to streamline clinic operations. The system supports efficient management of patient records, appointment bookings, medical examinations, and payment processing.

Tech Stack: ReactJS, Bootstrap, ASP.Net Core Web API, ASP.NET Core Identity, EF Core, SQL Server, Google Cloud.

Contributions:

- **Built** RESTful APIs for core functionalities including user management, scheduling, and medical records.
- **Designed** database tables and relationships tailored for efficient clinic management.
- **Implemented** JWT authentication combined with role-based access control to secure the system.
- **Developed** custom error-handling middleware to improve application stability.
- **Created** responsive UI components for the appointment booking process and patient record management.
